

The YT-M503 module is highly integrated, compact in size and minimal in size

With a height of only 22 mm and a total weight of less than 150 grams, it can be easily integrated into a wide range of industrial equipment and applications environment.

It is also a high-performance scanning module that makes it easy to read all kinds of 1D barcodes And can read a variety of 2D barcodes at high speed. YT-M503 has a very high scanning rate for 1D barcodes.

At the same time, its 2D imaging speed is five times more than the traditional, free to cope with a variety of scanning applications.

YT-M503 is built to meet the most demanding scanning requirements and provide consistent scanning in completely dark environments

Performance to fill the sun and oversee temperature range. YT-M503 is based on solid state technology and meets the most stringent requirements standard exposure to shock and vibration.
